

PAIN MEDICATION:

A 65-year-old male with a history of chronic back pain, hypertension, and diabetes mellitus. He is currently on a regimen of hydrocodone/acetaminophen 5/325 mg tablets, one tablet three times daily. He reports that his pain is not well controlled with his current medication and is seeking a change in his pain management plan. He has no history of substance abuse and is on no other medications. His vital signs are stable, and he is in good health otherwise.
